

MPL & PWA LAB PREREQUISITE

AIM: - Selecting features for application development, the features should comprise of:

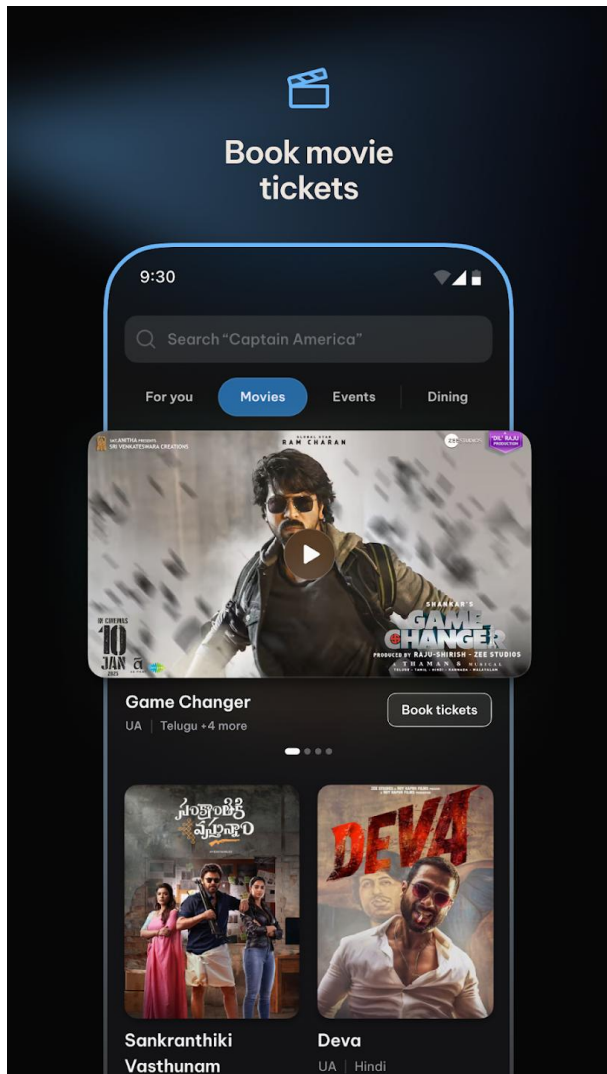

1. Common Widgets
2. Should include icons, images, charts etc.
3. Should have an interactive form.
4. Should apply navigation, routing and gestures
5. Should connect with FireBase database

Screen Shot	Features
	<p>Profile Page</p> <ul style="list-style-type: none">• Purpose: Enables users to register or log in by Google Account, or optionally by Facebook login or another email ID.• Features:<ol style="list-style-type: none">1. “Continue with Google” Button2. Option to use other email• Firebase Integration and Google Sign In Ensures secure login by storing user details in Firebase Authentication. GoogleSignInClient API can validate user identity based on Google Account credentials.• Facebook account sign in The LoginManager in Facebook SDK and handle sign in requests with Facebook account.

HomePage

1. **Navigation Buttons:** I'd use a BottomNavigationBar or a Drawer for easy navigation between different screens like Home, Profile, and Bookings.
2. **Icons for Notifications, Profile, and Search:** I'd place IconButton widgets in the app bar for quick access to notifications, the user's profile, and a search function. I would use icons like Icons.notifications, Icons.account_circle, and Icons.search to make it intuitive.
3. **Search Bar:** I'd add a TextField or use SearchDelegate to create a search bar where users can type and search for movies.
4. **Display Recommended Movies:** To show recommended movies, I'd use a ListView or GridView to dynamically display a list of movies. The data come from Firebase Firestore, so the recommendations would update as needed.
